INTERESTS

FPGAs, Machine Learning, Computer Architectures, Communication Systems

PROFESSIONAL SUMMARY

Seasoned researcher interested in FPGAs and efficient architectures for deep learning applications. My recent projects involve developing high-speed machine learning solutions for RF communication systems on the Xilinx RFSoc board, building token dataflow overlay architectures for accelerating highly sparse and irregular workloads, and more. I am a strong programmer and lifelong learner who has a keen interest in doing cutting-edge research.

EXPERIENCE

Postdoctoral Research Associate

October 2017 to Present

Computing Engineering Lab,
School of Electrical and Information Engineering
University of Sydney
Supervisors: Philip Leong, David Boland

Research Assistant

July 2012 to September 2012

Circuits and Systems Research Group,
Electrical and Electronics Engineering Department
Imperial College London
Supervisor: Nachiket Kapre

EDUCATION

Nanyang Technological University (NTU), Singapore

PhD, Computer Science & Engineering, February 2019

- Dissertation Title: *Dataflow Optimized Overlays for FPGAs*
- Advisor: Nachiket Kapre

Imperial College London, London, United Kingdom

BEng, Electrical & Electronics Engineering, June 2012

TEACHING

Project Supervisor, University of Sydney

Semesters 2018–Present

Responsibilities: Guidance and supervision to undergraduate students on their final year projects.

Teaching Assistant, NTU

Semesters 2014–2016

CE4054 - Programmable System on Chip,
CE4052 - Embedded Software Development

EXTRA- CURRICULAR

Data Science Specialization

March 2015 – April 2016

John Hopkins University

- Offered via the Coursera platform, the Data Science Specialization teaches how to use the tools of the trade, think analytically about complex problems, manage large data sets, employ statistical methodologies, create visualizations, build and evaluate machine learning algorithms, publish reproducible analyses, and develop data products.
